Edited Version 2016

Dear Madam, Sir,

I write to inform you about widespread misuses of modern biological, chemical and radiation technologies. They are employed by the security agencies of today's major powers, a coalition of Third World Countries and private, independent defence leagues in a clandestine, dirty, global B-C-R war.

1) Introduction	Page 1
2) Political Constellation	2
3) Enforcement Concepts	3
4) Command Centers	4
5) Global System of Labor Camps	4
with 5g) Dissection camps and misuses of genetics	7
6) Power Plots	13
7) Prospects	14

1) Introduction

The US CIA investigates from the late 40s on in its bio-chemical laboratories systematically naturally found venoms and synthesized toxins for their incisive effects on the human body, drawing also on exotic plants and animals, voodoo rites and pseudo-medical experiments in Nazi concentration camps. They scaled up their R&D efforts in the 50s rapidly and synthesized new classes of toxins, in goal depraved and outlawed, to manipulate every psychological, physiological, neurological and genetic function of plants, animals and humans. Concurring with US Military and NATO they develop an arsenal of non-conventional, non-lethal to lethal bio-, chem- and rad-tech weapons of mass destruction.

In one large scale project with a multitude of sub-projects they research the anatomy and neurology of the central, enteral and peripheral nervous systems with their coded bio-neuro active electro-magnetic fields in intentional misapplication of neurological technologies to manipulate the bio-chemical-electrical processes, determining spiritual, ethical, social, intellectual, motivational, emotional, sensual, motoric and sexual behavior.

Another large scale project researches structures and mechanisms of the human genome in intentional misapplication of mutagenic, hybridization and recombinant DNA technologies to cause with incisions into the genotype changes in the phenotype and shifts in the human gene pool. As goal has been set up the construction of the first 'biological bomb' for peace time employment in blanket and graded mass poisoning with gene altering agents of food and water supplies as well as mass control of individual psychological, physiological, neurological and genetic processes of home and foreign populations.

Today the present state of micro weapon technology with technological-industrial production and area covering, systematically planted, non-genetic toxins has realized electro-magnetic-bio-chemical programming of political-social profiles of more than a billion people of all groups of society a year worldwide.

2) Political Constellation

After WW II the US advanced to a superpower in possession of atomic weapons. They formally adhere to a constitutional democracy, human rights and freedoms. They adopt the ideological position of hegemonic policies as world order with political-ideological block formation of satellite states and role allocation.

2a) Driving forces are the political-military-intelligence-industrial power elites.

Political-military-social open and secret goals are stated by the National Security Council as decision making organ of the National Security Community. They draw out a global network of objective setting power lines.

2b) Open goal is global predominance with control and profit through leadership in the sciences, technologies, resources, applications and their professional fields with:

b1) Vital national economic basis, free international access to resources, advantageous terms of trade and international division of labor.

b2) Worldwide military presence, massive use of force doctrine, credible deterrence with ABC weapons for multiple overkill, aggressive weapon R&D programs, technological superiority of military and security forces.

2c) Secret goals work towards controlling predominance and foreign sided dependency.

They are authorized by executive order, though they are violations against the consent of the governed, constitutional standards and international conventions. They comprise:

c1) Monopoly in key security technologies, control over major R&D programs, surveillance of the information flow in its entirety, point censorship of all public media, social programming with control over political-religious-economic-social structures and processes, manipulation of individual psychological profiles and in planning of demographic structures of entire populations to tie all individuals, societies, governments and resources into the power network.

c2) The clandestine war has already begun in peace times at home and abroad.

Battlefields are e. g. information, social structures and processes, culture, psychology, sociology, life sciences, neurology, genetics, ecology and climate.

c3) Methods are covered operations with advanced technologies and pursuing corruption.

c4) Open war is re-defined from continuation of diplomatic efforts by alternate means to a locally limited intervention of short duration against scattered oppositional resistance.

c5) As facades serve friable curtains like a constitutional framework, illusions, old fashioned etiquettes, political correctness and censorship of system/security criticism.

c6) Achilles heel of secret policies is the perversion of all God given institutions.

2d) Consequences are e. g.:

d1) Security is not based anymore on law, but opens the door to high tech crime.

d2) A clandestine constitutional revolution has set up a militant nationalist government.

d3) Continuing warfare from WW I to WW II to Cold War to Anti-Terror War.

d4) Massive human rights violations and non-recognition of international conventions.

d5) Suffocation of all symbols of the emancipation of man by telos of mind.

2e) A coalition of the majority of Third World Countries, supported by Russia, and several private, independent defence leagues investigated the security services of the Western Atomic Powers and NATO, Russia, Japan, Germany, Israel and Saudi Arabia, stole equipment, plundered stockpiles, retrieved their technological-operational know-how, duplicated command centers and escalated under an apparently calm surface these operations into a clandestine, dirty, global high tech war between all existing and new emerging groups.

Their goals branch out widely:

e1) Information about the developmental status of bio-, chem-, rad-weapons.

e2) Protection against threats with B-C-R micro weapons.

e3) Predominance with global employment of B-C-R micro weapons.

e4) Political-military-social counter-leverage against the Western Powers.

e5) Suppression of any attempt towards publication of undercover methods.

e6) Revenge for torture, murder and 500 years of dehumanizing treatment.

e7) Indignation to lay waste depraved political leadership.

3) Enforcement Concepts

The global agenda of long term political block securement, control and expansion is enforced across collective political and social realities and individual political and social behavior.

3a) Priority of security planning over national, general public interests, as those find a balance in democratic processes through social weights and public discussion of issues, is achieved through representation in security panels of the legislative, judicative, administrative departments, political parties, private institutions, through public relation campaigns to support and justify the security apparatus, total information control and social programming.

Priority of security planning over international, general public interests of the Community of Nations is achieved through a global system of client states in continuous, collaborative coordination of interests with a supportive diplomatic network of e. g. transatlantic and -pacific partnerships. Their professional political-social-cultural decision making elites are established in office by formation, reorientation, cooperation, education, leadership training, open incentives and covered financial aid.

3b) Undercover intelligence operations realize the policy directives. The traditional goal, to topple an adversary without outer force by subversion and corruption in collapse from within, is replaced by establishment of a manipulable, stable, home and foreign public environment of opinions and actions as parts of a global political-military-social power network. The center of expansion strategies has shifted from diplomatic-military efforts towards undercover operations.

Top priority is total secrecy, requiring a gapless early warning system, spotting security threats against personnel, secret policy goals and methods. The US NSA e. g. employs over 50 000 administrators, analysts, scientists, technicians and operatives nationwide to screen the information flow. Any arising attempt towards publication of a victim's medical or legal evidence is cut short by hit teams. The themes of system and security are taboo. An intelligence review panel has power over life and death.

For total information control spies funnel illegal listening-video devices into every household, work and public place in the world. Every person is wired up with multi-sensors and signal transmitters to pursue him in all his prayers, travels, intellectual, professional and social activities throughout all phases of the day from his childhood to his demise. Brain wave mappings decode e. g. voices, visual images and thoughts. Genetic fingerprints list the complete gene sequences of the chromosomes. The data are sent via microchip sensors, emitters, amplifiers and satellite to the high capacity computers at the command center for evaluation.

3c) Technologies are the practical tools of the operational arms. The US and NATO Countries are the leading global researchers with dominance in the sciences and applications.

US/NATO research panels of the military, intelligence and security agencies (e. g. Defence Advanced Research Projects DARPA) develop the arsenal of compact weapon architectures over the spectrum of conflicts out of an array of large scale research, development, test and employment programs, which are offered, awarded, tested, set up for operation, departmentalized and institutionalized. Weaponizing of modern technologies is to hit progressively easier, faster, severer and more precise than foregone ones and to exhaust human-material, scientific-technological capabilities in space, in air, at sea, at land from single to large scale, non-lethal to lethal, intercepting to blocking to retaliating tools, mainly in misuses of physics, chemistry, biology, genetics, medicine and computer science. About 40% of the US military budget with total secrecy goes into more than 50 000 black projects of research, testing and employment with command centers and a system of labor camps. Developed are new classes of micro-weapons and toxins, their technology the 'key to power' in the 21st century, to manipulate physiological-neurological-genetic functions, crippling mostly man's inner freedoms of thought and movement. Toxins can be e. g. contaminants, bio-chemical-genetic agents, electrical current, electro-magnetic-thermal-optical-acoustic wave-particle radiation and neurologically coded misinformation.

4) Command Centers

4a) The security agencies of the Western Powers enforce secret policy goals in their countries with international intelligence agreements and division of labor. The US CIA/NSA/FBI, the British MI 5-6, the French DGSE and the German BND/MAD/AVS channel from their national command centers their government personnel, within their populations at large all groups perceived as dissidents like sympathizers of opposite ideological camps. Military intelligence channel from their national command centers military personnel, within the population groups like antiwar activists and draft resisters. The security organs of Western Industries keep track of management personnel and within the population of work and economy conform behavior.

4b) High tech command centers like the US Special Operational Command (SOC) are located within security bases. They supervise production lines of the toxins, storage and operations with delivery and set off systems, a global satellite surveillance-telecommunication system, single agents, groups, fronts and covered operations.

Data gathered are stored and evaluated by high capacity data processing equipment.

Poison dispensers in form of microscopically tiny pellets, containing toxins in gelatin skin or foil, a microchip, receiver, emitter and a nano-robot as well as tiny listening and video devices and bio-chemical-electrical-thermal-genetic sensors are produced in microchip precision engineering by the millions. As depot poison pellets they are implanted directly or placed on a carrier like an unknowing person or any object of daily use or a drink water reservoir or any stage of the food chain or a space based gliding capsule - flying drone device to be guided electronically into the vicinity of the target. They can be spun off several times out of multiple layers of equally tiny, hair like pneumatic guns with an effective range of about 30 feet to be shot into the skin of the target. Nobots, mechanical nano-robots, channel the pellets into site specific body tissue. They are applied single and massive, concentrated and blanket, random and selective, narrow and wide, scattered and systematic, limited and open ended, in closed and open mediums, contained and epidemic, preparatory and acute. The gelatin skin dissolves in body fluid, foil skin is set off electronically, time locked, by a preprogrammed code signal or sound or voice or within the body toxin concentration or neurological process recognition.

5) Global System of Labor Camps

Enforcement operations of all parties comprise a worldwide system of labor camps.

Camp guards are employed as spot, walk by, stalk, decoy and hit teams.

5a) Extermination camps: executioners eliminate more than one thousand people a year.

5b) Gas chambers: hit teams spray with nerve gases thousands of people a year.

5c) Radiation camps: hit teams cripple by wave-particle beams thousands of people a year.

5d) Sadism and sodomy camps: hit teams execute a billion druggings a year.

5e) Behavior manipulation camps: hit teams mass drug millions of people a year.

5f) Subversion camps: agents commit gross human rights violations around the world.

5g) Dissection camps: hit teams test new toxins on millions of people a year, e. g. for behavior programming by means of genetic agents.

5h) Deception camps: spies record electronically for control of the information flow hundreds of billions of conversations, objects like buildings, equipment, documents, electronic data and individual brain wave patterns, genetic fingerprints, physiological processes per day.

5i) Propagating the total lie, in the name of humanity they suppress publication of the unleashing of multiple, uncontrolled dangers of the eradication of billions of people with possible extinction of mankind.

5a) There is not one state security service of a major power that does not have its killing fields. Also the military security department of NATO operates an assassination squad to eliminate terrorists, who are intercepted in preparations, foreign agents, who penetrate security areas, traitors, who sell security information, deserters, who are caught up with behind hostile lines, security risks, who threaten to impair personnel or operations and critics, who become a formidable voice in public.

The assassinations are priority operations, well organized and quiet. A small intelligence court reviews the evidence, the target is pumped up with depot poison pellets, electronically marked, send to a remote area or a longer journey is waited for, death follows in an accident or break down, a death certificate is issued, citing an apparently natural cause of death. Where isolation is not possible, it is discredited and eliminated over time by a terminal disease like cancer.

Uncovered foreign operatives and own double agents e. g. by NATO are hung up at backwards crossed arms over a wall urinal in a basement of a remote station to be tortured by mechanical, electrical, radiative and bio-chemical means like CIA psycho and sodomy drugs for 2 - 8 days. The victim is dead, when all body fluids have stopped dripping.

5b) For gas chambers targeted are mainly people, working with the mind and propagating ideologically not acceptable messages like the leadership of an oppositional movement, dissenting journalists, lawyers, doctors, scientists and artists. Military nerve gases attack the central nervous system in specific functions like wake awareness, memory, concentration, reaction, coordination and balance, the peripheral nervous system with loss of physical power, agility, flexibility and sensitivity. Industrial toxic gases often are carcinogens, reducing first the pulmonary system, then other physiological functions and inducing in the long run tumorous growth. In debasement of the dignity of man and his mind, crippled are intellectual und physical strengths to the point of disability to perform tasks of every day life.

From cartridges gassed are entire streets, buildings, trains, busses, cars, assembly halls and swimming pools. Nerve gas pellets are attached to any object of daily use like packaging, news-papers, books, clothing and tools, the set off signal is timed for maximum toxic concentration at time of exposure. The target's home is laced mostly with by odor imperceptible dosages for long term effects, if not the bedroom itself is used as death chamber. H. Kohl and B. Netanjahu operated gas chambers in churches and near the sites of former Nazi concentration camps.

5c) Radiation camps entrap terrorists, insurgents, border influx, secret bearers like scientists of security technologies, wanted persons and manipulate crowds for riot control or fabrication. R-Guns utilize is the energy flow of spherical waves and directed, concentrated beams of lasers with light and heat, emitters with electro-magnetic and acoustic radiation, generators with subatomic-atomic particles and radioactive α -, β -, γ radiation. They are adjusted in cross section, intensity, wavelength, frequency, pulse duration and time pattern. Targets are by their bio-physiological-neurological electro-magnetic fields over a distance wirelessly without implant at the speed of light found, spot pointed, identified, tracked, brain linked, read, misinformed, manipulated and tortured with evoked, distorted perceptions, feelings, words, pictures, thoughts, memories, physiological functions and coerced behavioral responses. In intrusive synthetic telepathy encoded electro-magnetic signals interact with biologically field sensitive brain and body tissue.

The environment with people and objects is area covering, continuously, simultaneously from a distance telemetrically read at all data input, processing and output points.

Equipment is also programmed, disrupted, burned out and molten.

Digital, micro-technological devices realize wireless, precise, fast communication over large distances. They are employed in human separate tools, prostheses and as trans-human implants. A Cyborg has a micro-chip implant in the central, enteral or peripheral nervous system as a neuro-biological - data processing interface for augmentation or reduction of a physiological function, e. g. they accelerate in common military praxis the ground station - pilot observation, communication and reaction times.

5d) Targeted for labor camps of sadism and sodomy are activists like human rights workers in defence of unpopular causes, critical voices of the political system, the press and free market, environmentalists, radical groups of minorities, politically disruptive citizens like whistleblowers, paparazzi of the scandal press, bloggers of alternate media, drop outs from the rat race, security risks like soldiers, who object out of second thoughts, defectors from opposite ideological camps, violence pillorying pacifists and moral voices like people of faith, conviction, culture and achievements.

Front yards of the camps are a field for trainees with electronic 24/7/52 surveillance in all areas of life for smearing, slander, intimidation, alienation, discrimination, on line harassment, run around at the authorities, covert entry, contamination, physical damage, tampering with records, deception, fraud, entrapment, wrongful commitment to a mental institution, judicial paternalism, unlawful arrest and denial of charitable, medical, police and legal help.

d1) There is not a psychic or physical function in the body that cannot be electro-magnetic-bio-chemically stimulated and boosted, stabilized and maintained, sensibilized and broadened, narrowed and worn out, relaxed and dampened, disrupted and distorted:

- Chemical rape at any place and time reduces by blocking agents the target's mental, motivational, emotional and physical capacities, which are then eclipsed by a variety of sodomy drugs to manipulate in succession sexual drive, erotic sensations, emotions, sensibility of genital parts, secretion of sweat glands, speed, endurance, exhaustion, sleep, dream and hang-over. Induced mental images of perversity acts direct physical activities, while erotic stimulants have often been individually designed according to previously taken brain wave patterns.

The offspring is being monitored in its further development.

- Induced physical states are e. g. consistent drop-in-your-tracks fatigue, myocardial insufficiency, back and muscle pains, restriction of motion, sleep disruption, hyper-stress, total relaxation and accelerated aging.
- Induced emotional states range from anticipation to saturation, blind hope to despair, elation to anger, boldness to fear, overconfidence to diffidence, care to indifference, hypersensitivity to insensitivity. A 'joy of death frenzy' can supplant every agony of torture.
- Induced mental states distort consciousness, intention, conception, memory and operations to the point of dysfunction with non-resistance against adversities, hardships and threats. Specific function like abstract reasoning, language, computation, logic, memory and specific mental interests can be crippled. Stimulation towards 'blasphemy of the Holy Spirit' is achieved by boosters of fixed, eccentric theological themes and a desire to communicate. In long term psychological terror several neurological processes are periodically stimulated to extremes, e. g. seizure, hallucination or delirium, not to allow any recuperating relaxation periods.
- In all the target's personal development, identity and character, especially its political-ethical standards, are worn down, debased and suffocated in the suds of prostitution to cause traumatization, irrational behavior, self-destructive habits, which then run on to total personality breakdown. The victim, often with a depot poison pellet exacerbated pre-existing disease, induced sterilization and creeping ailment like tumorous growth in the genitals, is blocked in its professional work, isolated on the social level, disenfranchised, severed from welfare and family safety nets and diagnosed with a mental illness.

It is to die on the streets.

d2) Hit teams mass drug from depot for years entire water and food supplies from the start of the food chain to the selected target, at the reservoirs, agricultural producers, suppliers, food processors, distributors, supermarkets, restaurants, the target's home and in transport via repackaging-resealing facilities. Contaminated with toxins, taken up with skin contact, are objects of daily use like tools, first aid supplies, hygiene articles, textiles and dryers.

d3) Labor camps of sadism and sodomy as government and private sifting-out camps, have been set up around the whole world and are blanketing in mass applications entire regions, ethnic groups and political fractions with sodomy drugs. E. g. US stay behind forces in former occupied territories as in Germany after end of WWII (1945) have systematically targeted anti US/cold war activists and in Panama after the invasion (1989) supporters of General Noriega.

5e) Targeted for labor camps of behavior manipulation are mostly inconvenient middle class government, corporate, technical personnel and the population at large. On the first level individual behavior is suppressed or stimulated in its elementary physical needs, in exercise and sleep requirements, appetite and thirst, hygiene and beauty care. On the second level the emotional state is manipulated from thrift to the urge to go shopping and from stress, frustration to the desire to achieve social recognition up to power madness. On the third level motivation is capped to lethargy or boosted into go-on efforts in face of exhaustion or failure. On the fourth level intellectual interests are selectively capped or forced, while mental and ethical awareness are dampened to the point of unscrupulousness. The toxins are administered mostly from depot long term in small dosages to imprint habit forming behavior patterns. Social, communicative competences like cooperation in teams and hierarchical structures are manipulated out of the emotional state from diffidence to hostility, out of channeled motivation from dropping out to intriguing, through inducement of nervousness, stammering or trembling. In all the target's physical fitness, personal development, education, professional and social careers are predetermined.

Exxon e. g. stabilizes plant employees and their families for long term productive, reliable job performance.

5f) Labor camps of subversion are set up in foreign countries. Also within allied countries, who are regarded as time proven political partners, an intelligence agency promotes its secret policy goal of global dominance with covered operations: for realization of political-military interventions, free flow of information and access to open markets for resources with protection of the home market by hurdles of know-how, technology, infra-structure and finance, wash out of cultural identity, subversion of moral institutions, corruption of the foreign political-social structure by manipulation of the public press and inhibition of independent development of vital scientific, technological, economic and financial fields, fragmentation of political alliances, profit from their wars, in all dominance with foreign sided dependencies, one's own superiority by determination, resources, mass, size, means, diversity and reserves. The intelligence, counter intelligence and security agencies are scaled up to the required size to realize their secret policy directives and if necessary hiked up. Methods are:

f1) Collection and evaluation of information.

f2) Contacts with recruitment, counselling, disinformation, forgery, theft, bribery, extortion, prostitution, financial sponsoring and partnerships.

f3) Sold are proprietary information, low cost credits, logistical supplies, user rights, telecommunication systems, special technologies, bio-, chem- and rad-tech weapons.

f4) Their first tool always remains the covered operation in all hazard areas with information gathering, detection, identification, tracking, gaining of access, securing, recovery, mitigation, neutralization, retreat and exploitation. Hit teams operate a system of labor camps to build up from the control of the broad base of the population.

5g) Caught in dissection camps to serve as guinea pigs for non-consensual, illegal, covert, pseudo-medical life experiments, often with deterring, degrading torture, are terrorist suspects, captured freedom fighters, prisoners in undisclosed detention centers, prisoners in civilian jails, convicted of a heinous crime, tenacious dissidents for punitive action, the vulnerable like civilians in war torn regions, minorities in underdeveloped areas, suicidal persons, mental patients, the dying in nursing homes and intensive care wards, people considered to be expendable like estranged, uprooted, isolated, homeless and lone fighting individuals.

Answers and help seeking citizens are denied medical treatment. A doctor does not give a true diagnosis. Medical tests return normal. Criminal charges are turned down for insufficient evidence. Reports in public are discredited and cut short. None of the guinea pigs are to recover and in all cases the death certificate claims an apparent natural cause of death. Never are they to report about the causes of their sufferings. E. g. the governments of France and Israel developed their nerve gas agents with test series on FLN and Palestinian freedom fighters, taken prisoners, - none survived and their ashes were scattered over the desert.

Misuses of genetics

Misuses employ the life sciences not to cure diseases, but intentionally to induce them. Affected in core are biology, chemistry, medicine and also genetics as a base science with all its branches like human genetics, population genetics, pharmaco-genetics, behavior genetics, gene technology and the sciences following it and their related ones.

They serve life and not as a weapon to kill. Out of life sciences developed weapons always lead to inexpensive, perfidious weapons of mass destruction, penetrating all areas of life. Re-functioning biology, chemistry and medicine is a misuse in inversion of reason, maturity, dignity and ethics. The civilized world; customary international law; The Hague Land Warfare Convention (The Hague 1899); the Protocol for the Prohibition of Asphyxiating, Poisonous or other Gases and of Bacteriological Methods of Warfare (League of Nations Geneva 1925); The Biological Weapons Convention (UN Geneva 1972) and The Chemical Weapons Convention (UN Geneva 1992) outlaw their development, production, stockpiling as a means of warfare and call for their disarmament.

Misuses are described by political-military intentions, design criteria, employment agents, paths, mechanisms, degree of impairment and detection procedures.

About active agents and detective procedures no data are available here.

Weapon development

In a global fornication race to gain predominance in all clandestine, compact weapon systems, the major military powers press ahead to get electro-magnetic-bio-chemical-genetic micro-weapons ready for employment.

Genetic micro weapons lead towards the set goal of the US National Security Council in collaboration with NATO: construction and peace time employment of the first 'biological bomb'.

It is to render control of all political-social structures, processes and individual behavior patterns long term plannable and short term adjustable by predictable, population wide behavior programming by manipulation of genetic and neurological processes.

Developmental stages of genetic weapons are I) design, II) prototype, III) tests, IV) evaluation.

I) Design of genetic weapons

IA) Design criteria

A1) Political goal is genetic programming of complex human behavior patterns.

A2) Modernization goal is increased efficiency of present state of the art techniques of behavior channeling by attacking causes and not only symptoms with coverage of entire regions and population groups by stable, sustainable transferal of altered genetic strains to succeeding generations and in their economy by centralized supervision of a lean network of undercover operatives.

A3) Military goal is the capability of single and mass applications with selection of targets, grading of damages, fixing of place, time and circumstances.

A4) Economic goal is determination of the economic structure by individual basic needs, emotions and motivations, affecting the key economic indicators of e. g. corporate - labor force structures, net domestic product by kind of economic activity, private investments, consumption expenditures, net savings, labor peace, work ethics and productivity.

A5) Social goal is channeling of the social structure, especially the professional elites by manipulation of emotions, sexual behavior, motivations and basic traits of intellectual interests and capabilities and with it personal development, education, identity, character, professional and social careers.

A6) Demographic goal is channeling of the rates of still born, life birth, infant mortality, disease, disability, invalidity and death and with it key population parameters, base of and leverage on social and economic structures like population size and density, age group distribution, growth trends, health standards, care and insurance and further statistics like average work years, retirement age and life expectancy.

A7) Indicators of general health according to registered individual causes and external factors like environmental effects have become insignificant.

IB) Employment paths

B1) Physical delivery to target: Bypassing surgical incision and its recognition by the victim, toxic agents and genome altering segments in suitable genetic envelopes are packaged for transport and applications mostly into small gelatin or foil skins. 'Poison pellets', microscopically tiny toxic pellets and tiny bio-chemical-electronic sensors are channeled electronically path monitored into the vicinity of the target and shot in. The dissolving gelatin or a set off mechanism releases the toxins into the body.

B2) Physical transfer of genetic material: The foreign genetic material, achieving heterologous gene products with defined parameters, is transferred into host cells and nuclei by: in vivo or in vitro concentration increase in form of a precipitate or a charged complex, in vitro protoplast fusion or lipofection, effecting fusion to the plasma membrane of the cell, in vitro laser poring or micro-injection, physically opening the cell and in vitro electroporing, widening membrane pores.

B3) Transformation of genetic material: Insertion of a mutant or recombinant or synthesized base sequence proceeds by means of independent replication within the cell plasma or by integration into the host chromosome by transposition, a change of position of a transposable genetic element from one site of the genetic material to another. By cutting, strand transfer, joining of ends, the donor DNA is being covalently bonded. A transposable or mobile genetic element can insert, exit or relocate into non-homologous DNA independent of the host's recombinant functionality. As transposition carriers serve mostly bacterial and viral 'envelopes': bacterial, transposable genetic elements are e.g. IS elements (insertion sequence), TN elements (transposon), transposable phages; viral elements are e.g. classical transposons, retroposons, alu-like sequences; with mammals polyomaviruses, vacciniaviruses and retroviruses are employed. The gene targeting rate, the frequency of integration of an exogenously added DNA sequence into the nucleus per quantity of host DNA per added sequence, depends mainly on: transfer and transposition methods, homology between exogenous and host DNA, the vector system, length of the inserted string, accessibility of a target locus and environmental factors.

IC) Employment mechanisms

C1) 'Scientific rational base' is population genetics with bio-chem-technological site specific strain manipulations to model a group's or population's allele composition. Population genetics serves as a 'foundation' of human hand directed 'evolution'.

C2) Incisions are performed clandestinely, systematically, repetitively, supervised, corrected and catalogued on every foetus, youth and adult of the target group. The allele distribution of the common gene pool is tailored to a designed structure and frequency by means of introduction of desired and modification or elimination of undesired dominant and recessive traits. Individuals with genodeviant, 'substandard' traits are eliminated.

C3) Technologies are specific DNA mutagenic, hybridization and recombinant incisions.

C3,1) Mutations

- An induced ploid mutation is almost always a lethal defect, because of abnormally developing, non-functional cells leading to cell death, death of organism or still birth.
- An induced chromosome mutation with a change in the order of genes between two or within a chromosome by addition, elimination or rearrangement of a region results in a bio-chemical mutation, leading to a replication dysfunction with loss of an entire trait out of the phenotype or to transcription or translation dysfunction with growth transformation like tumorous growth in local body tissue.
- An induced gene mutation, a change in a base sequence of a gene, a structure or regulation changing, amplifying or repressing, forward or backward, single or complementary (synonymous), expressive or conditional, sometimes point, also nonsense (neutral) mutation, can destroy the function of a gene at the site of incision, or cause additional large scale rearrangements of adjacent DNA sequences, or alter the efficiency of gene expression (gene penetrance), the degree of trait formation also in growth, differentiation and final structuring of a function.

C3,2) Hybridization

Meiotic poisons can cause in recombination and cell division processes of: partial or perfect misalignment and misassortment of chromosomes, chromosome deformation and fragmentation, cytoplasm deformation, phase inhibition, cell death, sterility. Mitotic poisons act like meiotic poisons, affecting: chromosome alignment, assortment and form, cell division processes, nucleic and cytoplasmic morphology and in consequence cell functions with phase inhibition, cell death, sterility. Aside from noxious agents, hybridization is affected by heat, radiation, insertion of a function disrupting DNA strand and can lead with impairment of regulatory processes to tumorous growth and death of organism.

C3,3) Recombination

In vitro manipulated targeting sequences can contain elements to manipulate genome structures and genetically controlled processes in their entire spectrum: any parameter affecting gene expression, leading to amplification, depression, destabilization, dysfunction, toxin production, cell death, disablement of a function, any singular phase in meiotic and mitotic cell division, leading to irregular chromosome assortment, chromosome deformation and fragmentation, phase inhibition, cell and cell line dysfunction, cell death, sterility, malignant tumorous growth, any regulatory process of ontogenesis, mainly controlled by the homoeobox, leading to a change in development in timing, rate, location with de- and mal-formation of cell morphology, diverging growth and differentiation of functions, causing changes in functional capacity, cell unit dysfunction, uncontrolled growth, death of organism.

ID) Degree of impairment

Effects can be:

- D1) Death through disablement of a vital function or through a morphological malformation.
- D2) Disease through a temporal, local, graded manipulation of a physiological function by e. g. activation, stimulation, depression, deactivation, alteration and dysfunction.
- D3) Change in the level of a specific physiological, often neurological capacity.
- D4) Altered growth and differentiation of a specific physiological, often neurological capacity.
- D5) Change in the effectiveness of medication, vaccination, diagnostics and therapy.

Non-predictability

Genetic incisions affect directly the anatomy and physiology of an organism. Primarily manipulated is an elementary trait, where the phenotype with a morphological or functional distinction is traceable to a specific hereditarily passed on genotype and the individual gene or gene group as functional unit is identified with its bio-synthetic pathway. Massive, population wide genetic manipulations affect therefore in first line the demographic structure. Genetic incisions to determine a specific trait in the public psychological profile gaplessly, stably, time effectively will result due to the long causal chains, large number of variables, inter-dependencies and codetermining factors in an almost irreversible shift of frame in several allele frequencies of the world population's gene pool with uncontrollable, catastrophic side effects.

II) Prototype of genetic weapons

The prototype comprises three stages

IIA) The first stage realizes genetic identification, marking and tracking of every single person in every country by a network of undercover operatives and a satellite surveillance system.

IIB) In the second stage every single person is pumped up by manual or pneumatic means with depot poison pellets, containing genome altering agents.

IIC) In the third stage an electronic set off mechanism is installed at the command center of the security agency. The deployment structure allows for path options from a commissioned agent, from a global depot system of time locked depot poison pellets and from space based gliding capsule - flying drone devices.

IID) Mass destruction of population groups and over regions is realized over the sum of all single catalogued, depot poison pellets prepared targets.

III) Tests of genetic weapons

IIIA) Test series of bio-chem-genetic toxins for a worth analysis are conducted in the laboratory and training area with modeling, simulation, war game and also within the population at large for combat exposure. Life tests collect statistical samples over a number of single targets and entire population groups with epidemic spread, media, path, speed and conditions.

IIIB) Bio-chem-genetic toxins are screened with advanced analytical methods for their pathologic anatomical, physiological, neurological, psychological latent, present and long term effects over a broad spectrum, e. g. kind and degree of impairment, efficiency, selectivity, dosages, incubation times, side effects, codetermining factors, counter poisons, recuperation times, measurability, visibility and traceability.

IIIC) Sensors and toxins are surgically implanted by assisting medical personnel or are shot in by a hit team with a suitable carrier for modem like data transmission. A series of electromagnetic-optical-acoustic-biological-chemical-genetic sensors and radio emitters with RFID technology are placed cell specific into the body of the test object, the skull and all cortexes of the brain, e. g. the visual, hearing, language, thought, emotion and motoric regions to record neurological performances with e. g. sensual perceptions, mental operations, memory, moods and behavior, are placed along nerve strands and their axons, other organs, glands, muscles, skin, digestive tract, male or female reproductive system to record physiological performances. In addition, the victim's environment is wired up with illegal listening and video devices. The data are send via microchip sensor, emitter, amplifier and satellite to the ultra-fast high capacity computers with nano-technology and artificial intelligence at the command center for evaluation by the R&D team.

IV) Evaluation

Active warfare agents undergo a comprehensive military worth analysis according to present and desired requirement and performance standards in their bio-chemical-genetic components, production, handling, training, weapon concept, target vulnerability, operational engagement, mission accomplishment, infra-structure and costs.

Employment ready weapon systems are handed over to the operative command structure of the armed forces.

5h) Labor camps of deception are the power elites' representative facades.

h1) Presented is a collective reality as a wide, easygoing field of opportunities with:

- Constitutional framework with guaranteed civil liberties, though official authorities do not defend basic rights of life for system deviating citizens.
- Public mediation of interests with democratic means of conflict solving, though priority over all public interests belongs to hegemonic policies by clandestine means.
- Illusions simulate good will, human capabilities and conveniences, e. g. comprehensive mastery of nature with ever accelerating technological-economic progress.
- Etiquettes are e. g. old traditions and 'political correctness'.

h2) Ameliorated are critical issues, e. g. a war overseas as a local intervention.

h3) Reduced is the level of mass media below that of politically substantial contributions.

A population remains in its political behavior deceived by facades as it is bare of convictions, ethics, reason, maturity and real life experience with legal means of defence and remains satisfied in its role as a consuming, non-questioning, -probing, -knowing assenter.

h4) Pushed to the outskirts of society is the misery of millions through hunger, catastrophes, epidemics, exploitation, expulsion, human rights violations and mass murder.

h5) Side tracked from critical issues is by PR campaigns and misinformation.

h6) Not addressed are political-social intentions, conceptions and backgrounds as after the intentionally allowed attack on the Twin-Towers 9/11 for justification of the anti-terror war.

h7) Cut out from public opinion are ideologically non-acceptable statements.

- Discredited are critical voices through slander and denigration.
- Corrupted in power networks are oversight and legal protection by parliament, courts, citizens, press, medical, legal and civil rights associations.
- Eliminated is media effective opposition from public representatives, cultural institutions, relief organizations, watchdog organizations, whistle blowers and alternate media.
- Directly eliminated in a labor camp are system and security questioners.

In image fascism, means of deception are enforced by means of power.

Life expectations for the improvement of the human lot remain superficial.

The psychological underpinnings of society have become stupor, loss of orientation, distrust, paranoia, cynicism and burned in human rights abuses.

Gone is the informed citizen, who thinks independently over the full spectrum of his mind.

Contorted are historic records, which reflect with facades, gaps and fog in the public discussions the disrespect of the times for man, society, nature and God.

5i) Several private, independent defence leagues claimed to clean up these misuses of modern bio-technologies and to establish legal, internationally guaranteed safeguards.

The majority of the political-social elites does the opposite. Like the global powers they act out of archaic desires for prestige, power, possessions and pleasures, which are shielded by efficient, quiet and convenient intelligence methods.

i1) They tolerate the government security services' undercover institutions and operations.

i2) They keep a close watch on foreign security services with their own surveillance system.

i3) They set up their own command centers and networks of operatives. With plundered equipment and stockpiles, they employ the widest variety of psycho and sodomy drugs and test any new, experimental drug directly on the population.

i4) They pursue securement of their own networks and retaliation at competing government agencies, private defence leagues and any hostile person or group.

They conduct along the stages of investigation, corruption, fornication, copying, replication and proliferation a worldwide, dirty high tech war between all factions, each against all.

The escalation is incited by hate towards any bestiality conceivable.

i5) They suppress any publication of clandestine methods to forestall action by the public authorities. They do not help a single victim with a doctor.

They do not hang up a poster to inform and warn the general public.

They lie about life, creation, causes of procreation and causes of death.

i6) They are terrorist organizations according to German law (§ 129a StGB) and have multiplied to several thousand groups and supervise worldwide the largest system of labor camps. Their executioners e. g. sodomize their adopted targets under psychological terror to death, mostly with the perversity label of emergency medical care for the victims with anonymously shot in poison pellets.

6) Power Plots

Profit

We make a profit from our labors.
We employ our knowledge and skills,
Recruiting into our corporation,
Institutionalizing our social system,
Prospering: Le système, c'est moi.

Privileges

We surf with the crest of waves.
We enjoy unscatheable privileges,
Owing the media with her stories,
Blue collars don't have any say,
Spelling out: La réalité, c'est plaisir.

Persecution

Where shall we march from here?
Where to shall we turn our attention?
Persecute them and their children,
Letting everything hang out below,
Deciding: Liberté toujours.

Perversities

Hit teams work with clandestine sciences,
Turning their attention to monies earned,
Poisoning slowly their eat, drink and wear,
Stealing their perverse self, life and future,
Confirming: Unité de la gènealité.

Proof

Our trickeries are our Achilles heels.
Sparrows in droves jostle on rooftops,
Call with the voices of the slaughtered.
We have no place to go,
But to run for the ropes.

7) Prospects

7a) Motivations

The Major Powers, Third World and private defence leagues act out of lower instincts. Power is the most devastating archaic notion, narrow, vile, hateful, persistent, scheming and instrumentalizing social values, structures and processes in despotic perversion. The global players of hegemonic policies are not capable to fill human dignity with content, but oscillate without a base between the poles of illusion and bestiality.

7b) Global misdevelopments are e. g.:

- b1) Hunger, underdevelopment, disparities of wealth, environmental destruction, depletion of resources, overpopulation, exploitation, expulsion, massive human right violations, covered and open war.
- b2) Human hand developed design of a trans-human, digital-technological Cyborg.
- b3) Human hand directed evolution of a trans-human, gen-technological Chimaera.
- b4) In all, corruption, fornication, global misdevelopments and extinction of mankind have escalated to become the predominant forces of present day history.

7c) Conception of man

Man is a functional, mental form of life, independent and social, dynamic, abstract, diverse, complex, multi-logical, regenerating and reflective.

Modern technologies have extended the radius of human action microscopically to globally to macroscopically over ages with new possibilities and dangers.

- c1) Boundaries of knowledge have been enlarged with the thinkable, calculable and doable.
- c2) Vulnerability has been increased of devices by electro-magnetic manipulations and of man's physiology by traces of natural and synthesized bacteria, viruses and toxins.
- c3) Manipulations out of most advanced technology corrupt in first line human living conditions, where they cannot be perceived by the senses in the very small, very distant and difficult to detect.

7d) Ethics

The task of ethics is to solve cases of gross corruption with disastrous consequences. Its intention is to preserve ethical freedom, where not a major inhibiting factor runs to its self-destructive end, but a free choice of options for action has been preserved.

- d1) It is the right of the people to correct misdevelopments, leading to planetary catastrophes and to reverse a clandestine or open constitutional revolution and to institute a new government with the principle of constitutionality to draw power out of political-social life.
- d2) Cosmic emancipation aims at the long term survival of mankind in the universe. Natural, social, intellectual and spiritual boundaries are enlarged step by step. Methods are problem-conflict solving by language, enlightenment, laws and supervision. The standard for local actions is transposed to cosmic dimensions (Gen 18,19 TNIV):

*For I have chosen him, so that he will direct his children and his household after him
to keep the way of the Lord by doing what is right and just,
so that the Lord will bring about for Abraham what he has promised him.*

Sincerely

Udo Frentzen
